

Important Question of Data Mining

Unit 1 — Introduction to Data Mining

1. Define Data Mining.
2. What are the main functionalities of data mining?
3. Explain data preprocessing.
4. What is data cleaning? Why is it needed?
5. Explain data integration and transformation.
6. What is data reduction?
7. Define data discretization.
8. What is concept hierarchy generation?
9. Explain architecture of a typical data mining system.
10. Classify data mining systems.
11. Define association rule mining.
12. What is frequent itemset mining?
13. Explain different types of association rules.
14. What is correlation analysis in association mining?
15. Explain constraint-based association mining.

Unit 2 — Classification and Prediction

1. Define classification in data mining.
2. What issues arise in classification and prediction?
3. Explain decision tree classification.
4. What is Bayesian classification?
5. Define rule-based classification.
6. Explain classification by backpropagation.
7. What is Support Vector Machine (SVM)?
8. Define associative classification.
9. What are lazy learners?
10. Name other classification methods.
11. Define prediction in data mining.
12. What are accuracy and error measures?
13. How do you evaluate classifier accuracy?
14. What are ensemble methods?
15. What is model selection?

Unit 3 — Cluster Analysis

1. Define clustering.
2. What types of data are used in cluster analysis?
3. Explain major clustering methods.
4. What is partitioning clustering?
5. Explain hierarchical clustering.
6. Define density-based clustering.
7. What is grid-based clustering?
8. Explain model-based clustering.
9. What is high-dimensional clustering?

10. Define constraint-based clustering.
11. What is outlier analysis?
12. Difference between clustering and classification.
13. Applications of clustering.
14. Advantages of clustering methods.
15. Limitations of clustering techniques.
